

The Nicus Difference: AUTOMATION – FLEXIBILITY – DETAILS – EXPERIENCE

AUTOMATION

M-PWR was designed to automate your most complex tasks with a robust process engine that has more than 150 built-in functions specifically developed for IT Financial Analysts. M-PWR was jointly designed and developed with IT Financial Analysts from Fortune 1000 companies. We continue to listen to our users and add functionality to our solutions as their needs change. M-PWR can significantly reduce the time you spend slicing and dicing your data and let you get back to what you were supposed to be doing – analyzing your data.

FLEXIBILITY

M-PWR is the most flexible IT Financial Management solution on the market. You can run M-PWR as a SaaS or on your own infrastructure, behind your corporate firewall. Our dynamic data model lets you decide how your data is organized. You can easily create reports to provide essential information for everyone from the CIO to business and individual users of IT services. M-PWR has role based security to limit the data viewable by each organizational level.

DETAILS

No other IT Financial Management solution enables you to analyze your IT financial data the way M-PWR does. M-PWR pulls data at the lowest possible level and aggregates that data into multiple logical views. When our dashboards highlight an issue, M-PWR allows you to drill into the detail data to uncover the cause. Without our “super detail”, you only see part of the picture.

EXPERIENCE

Nicus has been solving IT Financial Management problems for Fortune 1000 companies since 1992. In those 18 years, Nicus has consistently provided outstanding customer service, innovation and leadership. We were in this business before it had buzz words like “visibility” and “transparency.” And we will continue to grow, improve, innovate and enhance our solutions as this market evolves with new technologies like virtualization and cloud computing.
