NICUS SOFTWARE

M-PWR's Bill of IT enables IT finance leaders and CIOs to run IT like a business. Bill of IT ensures there is automated alignment between IT investments and the value derived from those investments with the overall business strategy.

M-PWR BILL OF IT ALLOWS YOU TO:

- Automate the distribution of reports and invoices
- Drill down and through cost of services consumed
- Develop best practice allocation methodologies to align costs and consumption across the enterprise
- Provide GL and AR Interface
- Better manage consumption
- Dispute erroneous costs or charges questioning

NICUS M-PWR DELIVERS:

- Web reporting and dashboards
- Automated data collection and integration
- Rules engine for business logic, data transformation, and data validation
- Process engine with more than 100 built-in financial and data management functions
- Workflow (approvals and notifications)
- Robust security model

When cost and consumption align to Lines of Business and are presented as a bill or showback, the perception of those costs change. M-PWR utilizes best practice allocation methodologies to align cost and consumption of IT services within Lines of Business to the general ledger. Defendable bills with complete cost transparency enable IT leaders to build financial credibility across the enterprise.

M-PWR's advanced data integration capabilities eliminate the need to manually gather data from source systems, freeing IT to shift labor efforts to new investments. With more than over 150 predefined IT financial analysis functions, M-PWR simply and efficiently aligns cost and consumption of IT assets into IT business services that customers recognize. Additionally, Bill of IT enables users to develop complex what-if scenarios that provide insight into the impact of rate, consumption, or service level modifications.
